

MITRE ATT&CK TTP Mapping

Tool Name: MITRE ATT&CK Navigator

History:

MITRE ATT&CK (Adversarial Tactics, Techniques, and Common Knowledge) was developed by MITRE Corporation to provide a knowledge base of cyber adversary behaviors. The Navigator tool helps security analysts visualize and map real-world attack scenarios to known TTPs. It is widely used in threat intelligence, red team/blue team exercises, and incident response planning.

Description:

MITRE ATT&CK Navigator allows mapping of attack techniques to a visual matrix. Analysts can layer attacks, annotate techniques, and generate reports to understand adversary behavior and plan defenses.

What Is This Tool About?

- Visualizes adversary tactics and techniques.
- Helps map attacks to MITRE ATT&CK knowledge base.
- Supports collaborative analysis and reporting.

Key Characteristics / Features:

- Interactive TTP matrix

- Layer creation and annotation
- Custom coloring for techniques
- Export and import support (JSON)
- Regularly updated technique library
- Useful in threat modeling, red/blue team exercises
- Open-source and web-based
- Supports collaboration between analysts

Types / Modules Available:

- Layer Creation Module
- Technique Annotation Module
- Threat Mapping Module
- Export/Import Module

How Will This Tool Help?

- Map attack steps to TTPs
- Plan mitigations and security controls
- Visualize threats for reporting
- Support red/blue team exercises
- Aid in incident response and threat hunting

PoC Images (placeholders to add screenshots):

- Screenshot of a phishing attack mapped in the matrix
- Highlighted techniques: T1566 (Phishing), T1204 (User Execution), T1547 (Persistence)

15-Liner Summary:

- Visualizes TTPs
- Supports red/blue team exercises
- Open-source and web-based
- Collaborative tool
- Annotatable techniques
- Export/import via JSON
- Interactive matrix
- Regularly updated
- Threat modeling support
- Incident response aid
- Planning mitigations
- Reports generation
- Visual mapping of attacks
- Helps in cyber threat intelligence
- Easy for analysts to use

Time to Use / Best Case Scenarios:

- During threat modeling
- Performing attack simulations
- Security awareness exercises

When to Use During Investigation:

- Mapping detected attacks

- Reporting attack pathways
- Analyzing adversary behavior

Best Person to Use & Required Skills:

User: Security Analyst / Threat Intelligence Specialist

Skills:

- Knowledge of cyber attacks
- Incident response basics
- Understanding of MITRE ATT&CK framework
- Matrix visualization

Flaws / Suggestions to Improve:

- Web-based only, no offline tool
- Can be overwhelming for beginners
- Manual updates needed for internal threats
- Limited visualization options

Good About the Tool:

- Open-source and free
- Highly visual and interactive
- Accurate mapping of attacks
- Enhances security planning
- Supports collaborative work
